

Tests with error probes using Hermit 1.4.3.456

Tests concerning representation of systems.

Class error probe: asserted hierarchy

The screenshot displays the SCOSy web interface at <https://www.w3id.org/scosy#V1.0.0>. The active ontology is 'error probe' (https://www.w3id.org/climoo#SCOSy_0000009). The 'Class hierarchy: error probe' is shown as 'Asserted'. The hierarchy tree on the left shows 'owl:Thing' as the root, with 'Individual' as a child. 'ConcreteIndividual' is a child of 'Individual', and 'Endurant' is a child of 'ConcreteIndividual'. 'Endurant' has several children, including 'Aspect', 'Object', 'CapabilityManifestationInput', 'CapabilityManifestationOutput', 'CapabilitySubject', 'Collection', 'DispositionOutput', 'FunctionalComplex', 'complex system', 'complex system environment', 'System', 'functional system', 'Subsystem', 'InteractiveObject', 'Quantity', 'system', 'complex system', 'functional system', 'error probe', 'functional complex system', 'system boundary', 'system component', 'system environment', 'complex system environment', 'error probe', 'system environment component', 'system spatial region', and 'SystemFlowItem'. The 'error probe' class is highlighted in blue. The 'Annotations: error probe' panel shows 'rdfs:label' with the value 'error probe' (language: en). The 'Description: error probe' panel shows 'Equivalent To' as 'owl:Nothing' and 'SubClass Of' as 'functional system' and 'system environment'. The 'General class axioms' panel shows several axioms, including 'inverse (inheresIn) some Capability', 'inverse (inheresIn) some ObjectQuality', 'inverse (mediates) some ConnectionRelator', 'participatedIn some SystemEvent', 'inverse (inheresIn) some EmergentDisposition', 'inverse (mediates) some InteractiveRelator', 'Object and (*spatially disjoint from' some system), and 'Object'.

Class error probe: inferred hierarchy

The screenshot displays the SCOSy web interface at <https://www.w3id.org/scosy#V1.0.0>. The active ontology is 'error probe' (https://www.w3id.org/climoo#SCOSy_0000009). The 'Class hierarchy: error probe' is shown as 'Inferred'. The hierarchy tree on the left shows 'owl:Thing' as the root, with 'owl:Nothing' as a child. 'error probe' is a child of 'owl:Nothing', and 'Individual' is a child of 'owl:Nothing'. 'MaturityLevel' is a child of 'Individual', and 'Type' is a child of 'Individual'. The 'error probe' class is highlighted in blue. The 'Annotations: error probe' panel shows 'rdfs:label' with the value 'error probe' (language: en). The 'Description: error probe' panel shows 'Equivalent To' as 'owl:Nothing' and 'SubClass Of' as 'functional system' and 'system environment'. The 'General class axioms' panel shows several axioms, including 'inverse (inheresIn) some Capability', 'inverse (inheresIn) some ObjectQuality', 'inverse (mediates) some ConnectionRelator', 'participatedIn some SystemEvent', 'inverse (inheresIn) some EmergentDisposition', 'inverse (mediates) some InteractiveRelator', 'Object and (*spatially disjoint from' some system), and 'Object'.

Individual error probe: asserted hierarchy

The screenshot displays the Protege interface for the ontology 'functional system' (https://www.w3id.org/scosy#SCOSy_0000001). The 'Class hierarchy' tab is active, showing an 'Asserted' view. The hierarchy is as follows:

- owl:Thing
 - Individual
 - ConcreteIndividual
 - Endurant
 - Object
 - CapabilityManifestationInput
 - CapabilityManifestationOutput
 - CapabilitySubject
 - Collection
 - DispositionOutput
 - FunctionalComplex
 - InteractiveObject
 - Quantity
 - system
 - complex system
 - functional system**
 - system boundary
 - system component
 - system environment
 - system environment component
 - system spatial region
 - SystemFlowItem
- Event
- Situation
- MaturityLevel
- Type

The 'functional system' class is highlighted in blue. The right pane shows 'Nothing Selected'. The status bar at the bottom indicates 'Reasoner active but the ontology is inconsistent'.

Individual error probe: inferred hierarchy

The screenshot displays the Protege interface for the ontology 'functional system' (https://www.w3id.org/scosy#SCOSy_0000001). The 'Class hierarchy' tab is active, showing an 'Inferred' view. The hierarchy is as follows:

- owl:Thing

The right pane shows 'Nothing Selected'. The status bar at the bottom indicates 'Reasoner active but the ontology is inconsistent'.
